1. About this document

1.1 Version information

This document provides instructions for installing, using, and maintaining Vaisala HUMICAP® Humidity and Temperature Probes HMP3, HMP4, HMP5, HMP7, HMP8, HMP9, Moisture in Oil Probe MMP8, and Temperature Probe TMP1.

Table 1   Document versions (English)

Document code	Date	Description
M212022EN-D	March 2020	Added content for HMP3 and MMP8 probe models.
M212022EN-C	June 2019	Applicable from software version 1.0.9 onward. Added content for HMP9 probe model. Other added content: • Output parameters (page 10) • Adjusting measurement with Indigo 200 transmitter (page 42) • Problem situations (page 46) • Error messages (page 46) • Status registers (page 85) Updated content: • Updated technical specifications and dimension drawings of probe models • Updated presentation of Modbus register maps • Corrected numbering of decimal registers in section Measurement Data Registers (page 79)
M212022EN-B	June 2018	Applicable from software version 1.0.6 onward. Updated instructions for connecting to Indigo transmitters. Updated sections Measurement Data Registers (page 79) and Configuration registers (page 82).

1.2 Related manuals

Table 2   Related Manuals

Document code	Name
M211982EN	HMP3, HMP4, HMP5, HMP7, HMP8, HMP9, MMP8, and TMP1 Quick Guide

1.3 Documentation conventions

> **WARNING! Warning** alerts you to a serious hazard. If you do not read and follow instructions carefully at this point, there is a risk of injury or even death.

> **CAUTION! Caution** warns you of a potential hazard. If you do not read and follow instructions carefully at this point, the product could be damaged or important data could be lost.

> **Note** highlights important information on using the product.

> **Tip** gives information for using the product more efficiently.

> Lists tools needed to perform the task.

> Indicates that you need to take some notes during the task.

1.4 Trademarks

Vaisala® and HUMICAP® are registered trademarks of Vaisala Oyj.

All other product or company names that may be mentioned in this publication are trade names, trademarks, or registered trademarks of their respective owners.

2. Product overview

HMP series probes are humidity and temperature measurement probes with a digital output (Modbus protocol). The probes are designed for demanding humidity and temperature measurement applications. The probes have a two-part structure, with measurement electronics contained in the probe body and sensor(s) in the probe head. The probe body and the probe head are connected by a cable. Length options for this connecting cable depend on the probe model.

The probes are compatible with Vaisala Indigo transmitters. They can also be connected to Vaisala Insight software for configuration, calibration, adjustment, diagnostics, and temporary online monitoring.

2.1 Probe structure
Figure 1   Probe parts

1   Protection cap (remove before use)
2   5-pin M12 connector
3   Probe body with type label
4   Status indicator:

Green	Power on and probe online, flashes when communicating
Red	Error
Off	Power off or indicator disabled

5   Probe cable (do not cut)
6   Probe head (HMP7 model shown)
7   Location of sensor(s) on the probe head. Most probe models have a removable filter over the sensors that can be replaced if it gets dirty or damaged. Note that HMP9 and TMP1 do not have a removable filter.
8   Protection cap (remove before use)

2.2 Basic features and options

- Comprehensive list of output parameters. For example: relative humidity, temperature, dew point temperature, wet-bulb temperature, absolute humidity, mixing ratio, water vapor pressure, enthalpy. See Output parameters (page 10).
- Sensor purge provides superior chemical resistance (HMP models only)
- Probe and sensor warming functions minimize condensation on probe (HMP models only)

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

- Traceable calibration certificate:
    - HMP and MMP models: 6 points for humidity, 1 point for temperature
    - TMP1: 2 points for temperature
- Standalone Modbus RTU over RS-485
- Compatible with Indigo series of transmitters
- Can be connected to Vaisala Insight PC software for configuration, calibration, diagnostics, and temporary online monitoring

2.3 Output parameters

> On HMP probe models, the values of all available output parameters are always locked when chemical purge or extra heat functions are heating the sensor.

●   Output parameter is available

◐   Output parameter is available but its value is locked during sensor warming or probe heating (HMP7 only) unless temperature is written to register 0334_{hex} from an external source

−   Output parameter is not available on this model

Table 3   Availability of output parameters

Output parameter	Output unit	HMP3, 4, 5, 7, 8, and 9	MMP8	TMP1
Relative humidity	%RH	◐	−	−
Temperature	°C	◐	●	●
Dew point temperature	°C	●	−	−
Dew/frost point temperature	°C	●	−	−
Dew/frost point temperature at 1 atm	°C	●	−	−
Dew point temperature at 1 atm	°C	●	−	−
Absolute humidity	g/m^3	◐	−	−
Mixing ratio	g/kg	●	−	−
Wet-bulb temperature	°C	◐	−	−
Water concentration	ppm$_v$	●	−	−
Water vapor pressure	hPa	●	−	−
Water vapor saturation pressure	hPa	◐	−	●
Enthalpy	kJ/kg	◐	−	−

2.4 Additional features with Indigo 200 series transmitters

Connecting the probe to an Indigo transmitter provides a range of additional options for outputs, measurement viewing, status monitoring, and configuration interface access.

Examples of additional features available with Indigo 200 series transmitters include:

- 3.5" TFT LCD color display or non-display model with LED indicator
- Digital output or 3 analog outputs (depending on the transmitter model)
- 2 configurable relays
- Wireless browser-based configuration interface for mobile devices and computers (IEEE 802.11 b/g/n WLAN)

The selection of available additional features (for example, output and connectivity options) varies depending on the Indigo transmitter model. For more information on Indigo transmitters, see www.vaisala.com/indigo.

2.5 Safety

> **WARNING!** When returning a product for calibration or repair, make sure it has not been exposed to dangerous contamination, and is safe to handle without special precautions.

> **CAUTION!** Do not attempt to open the probe body. There are no user serviceable parts inside the probe body.

> **CAUTION!** Do not touch the probe head with your bare hands. Touching will deposit impurities on the probe head.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

> ⚠️ **CAUTION!** Be aware that the probe head may become hot to touch when functions such as chemical purge and probe heating are active.

2.6 ESD protection

Electrostatic discharge (ESD) can cause immediate or latent damage to electronic circuits. Vaisala products are adequately protected against ESD for their intended use. However, it is possible to damage the product by delivering an electrostatic discharge when touching, removing or inserting any objects inside the equipment housing.

Avoid touching component contacts or connectors when working with the device.

2.7 Regulatory compliances

The probes are in conformity with the provisions of the following EU directives:

• RoHS Directive
• EMC Directive

Conformity is shown by compliance with the following standards:

• EN 50581: Technical documentation for the assessment of electrical and electronic products with respect to the restriction of hazardous substances.
• EN 61326-1: Electrical equipment for measurement, control, and laboratory use – EMC requirements – intended for use in industrial locations.
• EN 55032: Information technology equipment – Radio disturbance characteristics – Limits and methods of measurement.

2.7.1 FCC Part 15 compliance statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that the interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that of the receiver.
• Consult the dealer or an experienced radio/TV technician for help.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备

Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

> ⚠️ **CAUTION!** Changes or modifications to this equipment not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

2.7.2 Canada ICES-003 compliance statement

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numerique de la classe B est conforme a la norme NMB-003 du Canada.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

3. Installation

When you choose the installation location for the probe, consider the following:

- Verify the operating environment specification of the probe model. The probe head typically has a much wider operating temperature range than the probe body.
- If the temperature of the measured environment differs greatly from ambient temperature, the entire probe head and preferably plenty of cable must be inside the measured environment. This prevents measurement inaccuracy caused by heat conduction along the cable.
- Probe mounting options are model-specific.
Figure 2   Example installation

1   Mount the probe head horizontally to prevent any water condensing on the probe head from running to the sensors.
2   Let the cable hang loosely to prevent condensed water from running along the cable to the probe body or probe head.
3   Attach the probe body to a wall or other surface using the two mounting clips (Vaisala item 243257SP) supplied with the probe. Each clip attaches to the installation surface with one screw (screw hole Ø 4.2 mm).
4   Cable to Modbus master or Indigo transmitter.

⚠ **CAUTION!** The supplied mounting clips are not designed to withstand strong vibration. Use other methods to secure the probe body if necessary. For example, attach the probe body using a cable tie.

More information

‣ Default communication settings (page 77)

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备

Ø 12 [0.47]
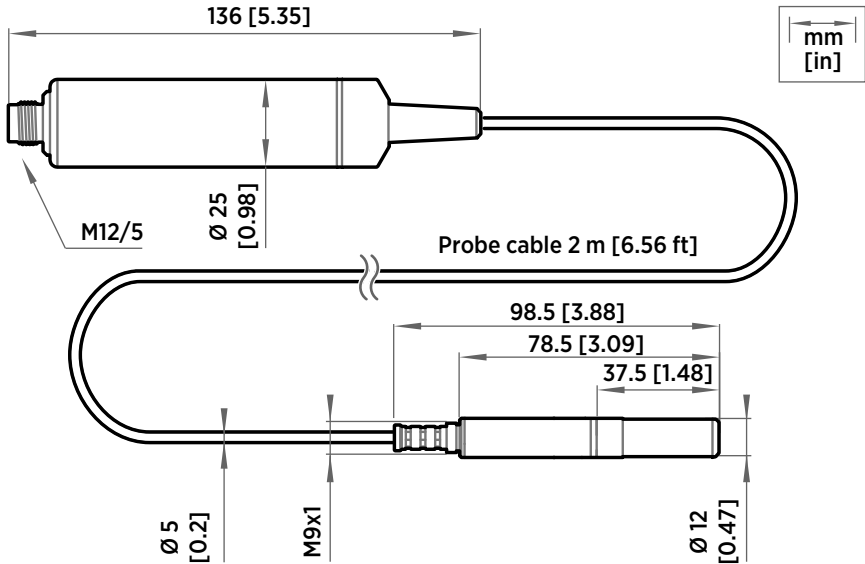

Figure 3   HMP3 probe dimensions

Vaisala HUMICAP® Humidity and Temperature Probe HMP3 is a general purpose probe designed for various industrial processes. The probe structure allows for replacing the sensor without tools, making it suitable for applications such as paint booths and other industrial applications where periodic recalibration alone is not sufficient for maintaining the probe performance. Other suitable applications include, for example, industrial HVAC systems, cleanrooms, and environmental chambers.

- Operating temperature for probe head −40 ... +120 °C (−40 ... +248 °F)
- Operating temperature for probe body −40 ... +80 °C (−40 ... +176 °F)

If purchased with a composite sensor instead of the field replaceable HUMICAP® R2 sensor, HMP3 can use the chemical purge feature. In environments with high concentrations of chemicals and cleaning agents, the chemical purge option helps to maintain measurement accuracy between calibration intervals.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com
3.2 HMP4 probe

Figure 4   HMP4 probe dimensions

Vaisala HUMICAP® Humidity and Temperature Probe HMP4 is designed for high-pressure applications such as compressed air systems in maritime, breathing air, and industrial applications, where measurement performance and chemical tolerance are essential.

- Temperature measurement range −70 ... +180 °C (−94 ... +356 °F)
- Operating pressure 0 ... 10 MPa (0 ... 100 bar)
- Operating temperature for probe body −40 ... +80 °C (−40 ... +176 °F)
- M22×1.5 or NPT1/2" fitting body

> Use a sealing ring (Ø22×27×1.5 Cu) with the M22×1.5 fitting. Replace the sealing ring every time the probe is detached. Three sealing rings are supplied with the fitting.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com
3.3 HMP5 probe

Figure 5   HMP5 probe dimensions
Figure 6   Optional mounting flange 210696 dimensions

Vaisala HUMICAP® Humidity and Temperature Probe HMP5 is designed for high-temperature applications such as baking ovens, pasta dryers, and industrial drying kilns, where measurement performance and chemical tolerance are essential.

• Temperature measurement range −70 ... +180 °C (−94 ... +356 °F)

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

- Operating temperature of probe body −40 ... +80 °C (−40 ... +176 °F)
- 250-mm (9.84 in) probe allows easy process installation through insulation

3.4 HMP7 probe
Figure 7   HMP7 probe dimensions

Vaisala HUMICAP® Humidity and Temperature Probe HMP7 is designed for applications that involve constant high humidity or rapid changes in humidity, such as drying and test chambers, combustion air, and other humidifiers and meteorological measurements, where measurement performance and chemical tolerance are essential.

- Temperature measurement range −70 ... +180 °C (−94 ... +356 °F)
- Operating temperature of probe body −40 ... +80 °C (−40 ... +176 °F)
- Probe heating and sensor warming functions minimize condensation on probe
- Vapor and pressure proof construction

Probe heating

HMP7 supports probe heating. Probe heating heats up not only the sensor, but the entire probe head. When probe temperature is heated above dew point temperature, condensation on the probe can be avoided while measuring the dew point temperature of the process.

18

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

If probe heating is enabled, output parameters that are dependent on temperature measurement (such as relative humidity) are locked whenever probe is heated unless the true temperature of the measured environment is updated to the temperature compensation register of the probe from another measurement instrument (for example, the TMP1 probe). Output parameters such as dew point temperature that can be measured or calculated without this external temperature information are available even without the temperature input.

3.5 HMP8 probe
Figure 8   HMP8 probe dimensions

Vaisala HUMICAP® Humidity and Temperature Probe HMP8 is designed for pressurized applications in compressed air systems, refrigerant dryers, and other pressurized industrial applications, where easy insertion and removal of the probe and adjustable installation depth into the pipeline are needed.

- Temperature measurement range −70 ... +180 °C (−94 ... +356 °F)
- Operating temperature of probe body −40 ... +80 °C (−40 ... +176 °F)
- Operating pressure 0 ... 4 MPa (0 ... 40 bar)
- Probe installation depth can be freely adjusted and probe can be hot-swapped from pressurized pipelines with an installation valve
- ISO1/2″ or NPT1/2″ fitting body

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

3.5.1 Attaching ball valve kit to process
1   Ball valve handle: must point to the same direction as the ball valve body when installing.
2   Extension nipple, threads G1/2 ISO228/1 and R1/2 ISO7/1.
3   Ball valve body. When tightening the assembly, turn only from the ball valve body.
4   Ball of the ball valve.
5   Welding joint, threads R1/2 ISO7/1.

▶ 1. Attach the welding joint to the process pipe or chamber.

2. Apply a sealant (MEGA-PIPE EXTRA No. 7188 or LOCTITE® No. 542 with activator No. 7649) on the threads of the welding joint and screw the bottom of the ball valve onto the welding joint.

3. Tighten the ball valve assembly by turning from the ball valve body.

> ⚠ **CAUTION!** Tightening the ball valve kit by turning the extension nipple can break the sealing. Tighten the ball valve assembly only from the ball valve body.

4. If you need to cap the ball valve assembly before installing or after removing the probe, attach a blanking nut to close the top of the valve.

3.6 HMP9 probe
Figure 9   HMP9 probe dimensions

Vaisala HUMICAP® Humidity and Temperature Probe HMP9 is designed for easy installation into rapidly changing environments where fast response time, measurement performance, and chemical tolerance are essential.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

The probe head can be mounted through thin metal walls using the included cable gland or mounting grommet. Two grommets are included: small one for 6.5 mm diameter hole, and large one for 12.5 mm diameter hole.

You can also attach the probe head directly using a zip tie. The probe head should be attached from the point near the black plastic part.

- Temperature measurement range −40 ... +120 °C (−40 ... +248 °F)
- Operating temperature of probe body −40 ... +60 °C (−40 ... +140 °F)
- Integrated filter (non-replaceable)

> ⚠ **CAUTION!** Do not damage the probe head by bending, crushing, or striking it. Avoid overtightening when installing the probe head through a cable gland.

3.6.1 Installing HMP9 through a cable gland
Figure 10   Installing HMP9 probe head through a cable gland

1   Black plastic part of the HMP9 probe head
2   Nut for tightening the probe in place
3   Base of the cable gland
4   M10×1.5 threads of the cable gland

> ⚒ • M10×1.5 cable gland (included with HMP9 probe)
> • Drill with 8.5 mm bit
> • M10×1.5 threading tap
> • 13 mm wrench

▶ 1. Drill a 8.5 mm diameter hole in the installation location.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

2. Use a threading tap to create a M10×1.5 thread in the hole.

3. Install the base of the cable gland in the hole and tighten with a 13 mm wrench.

4. Insert the seal of the cable gland in the base and place the nut of the cable gland over the probe head.

5. Insert the probe head in the cable gland up to the black plastic part of the probe head. Leave the black plastic part entirely outside the cable gland. Tighten the cable gland to finger tightness.

6. Tighten the nut of the cable gland with a 13 mm wrench until the probe head stops moving. Do not overtighten.

3.7 MMP8 probe
Figure 11   MMP8 dimensions

Vaisala HUMICAP® Moisture in Oil Probe MMP8 enables fast and reliable measurement of moisture in oil. It uses proven Vaisala HUMICAP® sensor that was developed for demanding dissolved moisture measurements in transformer and lubrication oils, hydraulic fluids, and other liquids.

MMP8 measures dissolved moisture in oil in terms of the water activity (a_w), relative saturation (%RS), and temperature (T). Water activity or relative saturation indicate directly whether there is a risk of free water formation. This data is relevant in lubrication oil applications where detecting water ingress and preventing free water formation is crucial. The measurement is independent of oil type and age.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

MMP8 can also output ppm, the average mass concentration of water in oil. Vaisala has this conversion readily available for specific oils, including mineral transformer oil. This allows continuous measurement of ppm concentration in power transformer condition monitoring.

• Temperature measurement range −40 ... +180 °C (−40 ... +356 °F)

When installed with the ball valve kit, the MMP8 is ideal for installation into processes where the probe needs to be installed or removed while the process is running. Probe installation depth is adjustable. Pressure fitting options are ISO 1/2″ and NPT 1/2″. MMP8 is delivered with a manual pressing handle that allows the probe to be pushed against process pressure.

For installation instructions of the ball valve see Attaching ball valve kit to process (page 20).

3.8 TMP1 probe
Figure 12   TMP1 probe dimensions

Vaisala Temperature Probe TMP1 is designed for demanding temperature measurements in industrial applications such as pharmaceutical industry and calibration laboratories, where accuracy and robustness are essential.

• Temperature measurement range −70 ... +180 °C (−94 ... +356 °F)
• Operating temperature of probe body −40 ... +80 °C (−40 ... +176 °F)

3.9 Wiring
Pin #	Function	Notes	Wire colors in Vaisala cables
1	Power supply	Operating voltage: • HMP7: 18 ... 30 VDC • Other models: 15 ... 30 VDC Current consumption: 10 mA typical, 500 mA max.	Brown
2	RS-485 -		White
3	Power GND and RS-485 common		Blue
4	RS-485 +		Black
5	Not connected		Gray

Figure 14   RS-485 wiring

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com
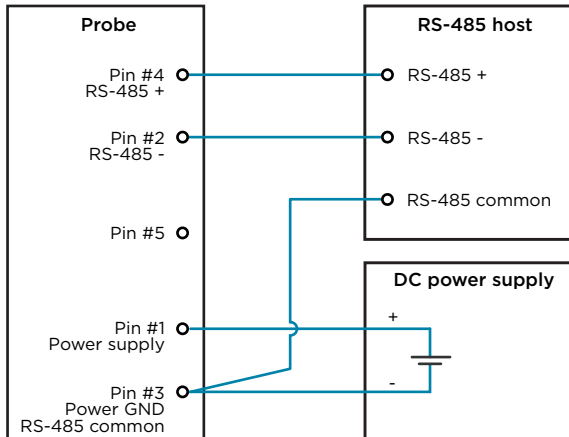

i Recommended maximum length of the RS-485 line is 30 m (98 ft).

4. Configuration with Insight software

4.1 Vaisala Insight software

Vaisala Insight software is a configuration software for Indigo-compatible devices. With the Insight software, you can:

- See probe information and status
- See real-time measurement
- Record data up to 48 hours and export in CSV format
- Calibrate and adjust the probe
- Configure probe features such as measurement filtering, chemical purge, heating, and serial communication

Microsoft Windows® operating system and Vaisala USB cable (no. 242659) required.

Download Vaisala Insight software at www.vaisala.com/insight.

4.2 Installing driver for the USB service cable

ⓘ Only Windows® operating systems are supported by the driver of the USB service cable.

▶ 1. Connect the USB service cable to a USB port on your computer. Windows® detects the new device and installs the appropriate driver.

2. Open **Devices and Printers** from the Windows® Start menu. Use search to find it if necessary (search for "devices").

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备

Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

3. Locate the cable in the list of devices:
   - If the device is listed as **Vaisala USB Device** with a COM port number in brackets, the cable is ready for use. **Note the COM port number, you will need it later.**
   - If the device is listed as **Vaisala USB Instrument Cable** without a COM port number listed, you must install the driver manually.
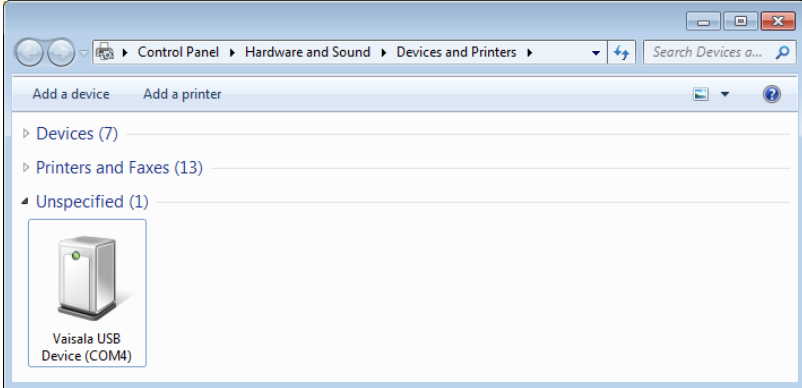

4. To install the driver manually:

   a. Disconnect the USB service cable from the computer.

   b. Download the Vaisala USB driver at http://www.vaisala.com/software (select the appropriate USB Instrument Driver Setup for your cable).

   c. Run the USB driver installation program `Vaisala USB Device Driver Setup.exe`. Accept the installation defaults.

   d. Go back to step 1 and verify that the driver installation works as expected.

4.3 Connecting to Insight software

> - Computer with Microsoft Windows® operating system and Vaisala Insight software installed
> - USB connection cable (no. 242659)

> **CAUTION!** When connecting several devices at the same time, note that your computer may not be able to supply enough power through its USB ports. Use an externally powered USB hub that can supply >2 W for each port.
Figure 15   Connecting probe to Insight

1. Open Insight software.

2. Connect the USB cable to a free USB port on the PC or USB hub.

3. Connect the probe to the USB cable.

4. Wait for Insight software to detect the probe.

4.4 Configuration options

Select ⚙ **> Configure Device** to access configuration options in Insight software.

Available configuration options include all of the Modbus configuration registers (see Configuration registers (page 82)) and several additional options. Insight software is the recommended way to change the probe configuration.

> You can restore the probe back to its default settings using the **Factory Default Settings > Restore Settings** function. Doing this will also clear any user adjustment and restore the latest factory calibration.

Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com
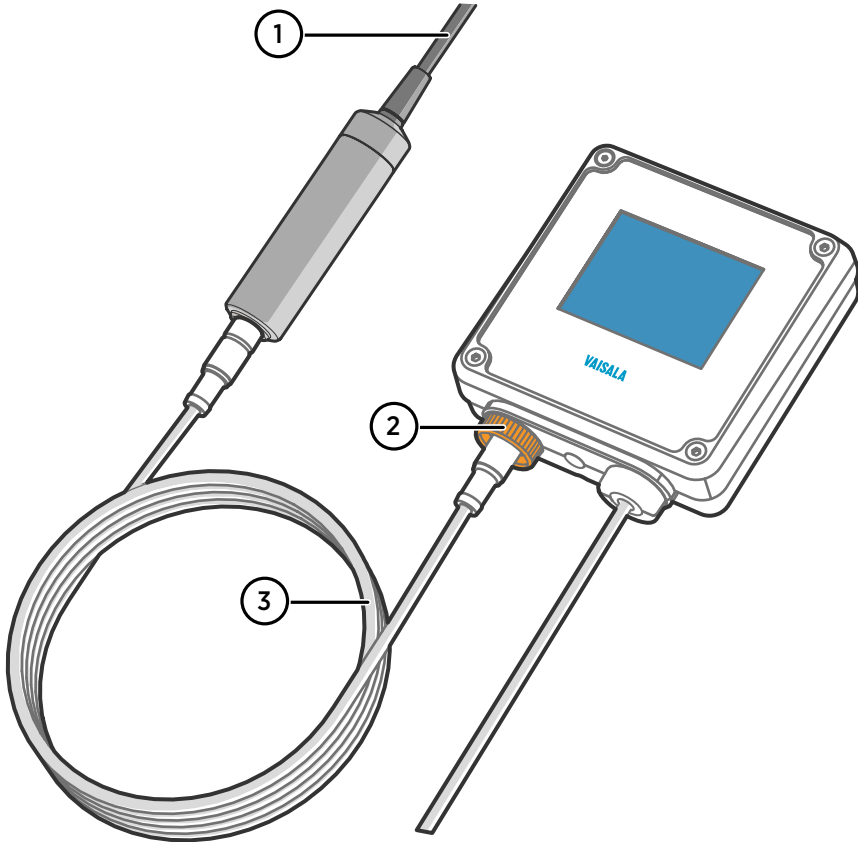

Figure 18   HMP7 attached to Indigo 200 series transmitter with a cable

1   Cable to probe head
2   Locking wheel: insert cable, hold in place, and turn the wheel counterclockwise
3   Connection cable

The probe can be connected to Vaisala Indigo transmitters, either directly on the transmitter from the probe's connector, or by using a cable between Indigo and the probe.

Indigo transmitters are host devices that extend the feature set of connected probes with a range of additional options for outputs, configuration access, measurement viewing, and status monitoring.

The selection of available additional features (for example, output and connectivity options) varies depending on the Indigo transmitter model. Depending on the model, a display is available as an optional selection or as a standard feature. In the non-display model, an LED indicator is used for notifications.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

5.2 Attaching probe to Indigo 200 series transmitter
Figure 19   Attaching the probe to Indigo 200 series transmitter

▶ 1. Insert the probe or the connection cable into the transmitter's connector. Use of connection cable is recommended for strain relief.

2. Turn the locking wheel of the transmitter to lock the probe or cable in place. **Do not turn the probe or the cable itself**, as that will damage the connectors.

3. If you are using a connection cable, connect the probe to the cable.

4. When the transmitter recognizes the connected probe, it shows a notification message on the display.

5.3 Wireless configuration interface overview

The wireless configuration interface has two user levels:

- All users have view-only access (no configuration rights, not password protected).
- Personnel that carry out configuration tasks can log in with an administrative password that allows changing the transmitter and probe settings.

To use the wireless configuration interface to modify the settings of your Indigo transmitter and the connected probe, you must first enable the transmitter's wireless connection and then connect to Indigo with your mobile device or computer. Most major browsers (for example, Firefox, Chrome, Safari, and Internet Explorer) are supported: using the most recent version is recommended.

5.4 Connecting to wireless configuration interface
Figure 20   Enabling and accessing wireless configuration interface of Indigo 200

1 Wireless connection activation button
2 Wireless connection indicator (WLAN symbol) on the Indigo display
3 Choose Indigo (**Indigo_ID[xx]**) from your wireless device's list of available connections

5.5 Logging in to wireless configuration interface

Log in to Configuration Interface

User name

Admin

Password

•••••

Log in

Serial No. A1234567   Version 1.2.0

Figure 21   Indigo login view

When you open Indigo's wireless configuration interface in your browser, you are prompted to log in. There are 2 available user levels:

- **User**: view-only access available for all users. Does not require a password.
- **Admin**: password-protected access. To change settings, you must log in as admin.

To log in:

1. Enter the user name and password:

   a. To log in as user (view-only access, no configuration rights), select **User** from the **User name** dropdown. Leave the **Password** field empty.

   b. To log in as admin (required for configuration), select **Admin** in the **User name** dropdown and type the admin password (default: **12345**) in the **Password** field.

2. Select **Log in** after entering the login credentials. The wireless configuration interface opens in the **Measurements** view.

> The user level (**User** or **Admin**) is shown in the upper right corner of all menu views.
> Select the user/admin icon in the upper right corner to change the user level.

6. Maintenance

6.1 Cleaning the probe

⚠️ **CAUTION!** Do not attempt to clean the sensors under the filter in any way.

ℹ️ Do not spray anything directly on the probe head, since that may deposit impurities on the sensors.

You can clean the probe, probe body, and cable by wiping them with a soft, lint-free cloth moistened with water or a suitable cleaning agent, such as isopropyl alcohol. Do not wipe the filter: wiping the filter may block its pores and/or deposit residue on the filter. If the filter is heavily contaminated, replace it.

When cleaning, follow these precautions:

- Avoid touching the filter. If you need to touch the filter, always wear clean gloves (cotton, rubber or similar material). Keep the filter free of any grease or oil.
- Do not scrape the probe or the probe body.
- Do not immerse the probe or the probe body in liquid to clean them.
- Wipe cleaning agents off the probe, probe body, and the cable after cleaning.

After cleaning the probe, it is recommended to perform a chemical purge.

6.1.1 Chemical tolerance

ℹ️ Avoid exposing the probe to cleaning agents for unnecessarily long periods of time.

Table 4   Suitability of cleaning agents

Cleaning Agent	Suitability
Acetone	Suitable
Chlorine disinfectants	Suitable
Ethanol	Suitable
Heptane	Suitable
Isopropyl alcohol	Suitable

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

6.2 Changing the probe filter

- New compatible filter
- Clean lint-free gloves

CAUTION! Sensors are easily damaged when the filter is not in place. Handle the probe head carefully.

HMP9 and TMP1 probe models do not have a removable filter.

1. Put on clean gloves before touching the filter.
2. Turn the filter counter-clockwise to loosen it.
3. Remove the filter from the probe head. Be careful not to touch the sensors with the filter.
4. Install a new filter on the probe head. Tighten the filter properly (recommended force 5 Nm).

6.3 Replacing the HUMICAP R2 sensor

- New HUMICAP® R2 sensor
- New compatible filter
- Clean lint-free gloves
- 11.3 %RH and 75.5 %RH humidity references (using Vaisala HMK15 Humidity Calibrator)
- Computer with Microsoft Windows® operating system and Vaisala Insight software installed
- USB connection cable (no. 242659)

Follow this procedure to replace a HUMICAP® R2 humidity sensor it has been damaged, or normal adjustment is not sufficient to restore the humidity measurement accuracy. It is recommended that you replace the filter at the same time. The procedure includes a special 2-point adjustment of humidity measurement using Insight PC software. This adjustment must be done every time after the HUMICAP® R2 sensor has been replaced.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

> ⚠️ **CAUTION!** Only the HUMICAP® R2 sensor is designed to be replaced by the user. Other humidity sensor types available for HMP series probes are composite sensors where the humidity sensor and temperature sensor are permanently attached together. If you need to replace a composite sensor, contact a Vaisala Service Center.

> ⚠️ **CAUTION!** Sensors are easily damaged when the filter is not in place. Handle the probe head carefully.

> ⚠️ **CAUTION!** Reverting the probe to factory settings clears the adjustment values entered in this procedure. If you need to revert the probe to factory settings after replacing the sensor yourself, write down the values on the **Adjustment data** page beforehand, and enter them again after applying the factory settings.
Figure 22   HMP3 probe head with filter removed

1   Pt100 temperature sensor
2   HUMICAP® R2 humidity sensor

▶ 1. Put on clean gloves before touching the filter.

2. Turn the filter counter-clockwise to loosen it.

3. Remove the filter from the probe head. Be careful not to touch the sensors with the filter.

4. There are two sensors under the filter, the HUMICAP® sensor and a temperature sensor. Identify the HUMICAP® sensor and make sure it is of the R2 type (temperature sensor not attached to it).

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

5. Pull out the old HUMICAP® R2 sensor and insert the new one.

> ⚠️ **CAUTION!** Handle the new sensor by the plastic frame. Do not touch the sensor element in the middle of the sensor. Do not touch the temperature sensor.

6. Open Insight software.
7. Select **Settings > Advanced Mode**.
8. Connect the probe to Insight. See Connecting to Insight software (page 28).
9. Select ⚙ **> Calibrate > Yes** to switch the probe to calibration mode.
10. Select **Adjustment data**.
11. Adjust the 11.3 %RH point (dry end):
    a. Insert the probe head in the 11.3 %RH reference.
    b. Wait for the measurement to stabilize fully.
    c. Click table cell A1 under **RH adjustment data** and enter the value of the humidity reference (`11.3`).
    d. Click table cell B1 and enter the %RH measured by the probe.
12. Adjust the 75.5 %RH point (wet end):
    a. Insert the probe head in the 75.5 %RH reference.
    b. Wait for the measurement to stabilize fully.
    c. Click table cell A2 and enter the value of the humidity reference (`75.5`).
    d. Click table cell B2 and enter the %RH measured by the probe.
13. Click outside the table to commit the adjustment.
14. Remove the probe head from the calibration reference and install a new filter. Tighten the filter properly (recommended force 5 Nm).
15. Select the **Calibration information** tab and update the **Calibration date** and **Calibration text**.
16. Select **Close > Yes** to exit the calibration mode.

6.4 Calibration and adjustment

The probe is fully calibrated and adjusted as shipped from the factory. To maintain the accuracy of the measurement, calibrate and adjust the probe as needed. Typical calibration interval is one year, but depending on the application it may be necessary to check the accuracy more frequently.

When adjustment is necessary, you can have Vaisala calibrate and adjust the probe. To order calibration services from Vaisala, visit store.vaisala.com. You can also do the adjustment yourself using the Insight software.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

WARNING! When returning a product for calibration or repair, make sure it has not been exposed to dangerous contamination, and is safe to handle without special precautions.

If you think the device is not measuring correctly, calibration and adjustment is not the first thing to do. Check the following first:

- Make sure nothing is interfering with the measurement: heat sources, temperature differences, or condensation.
- Check that there is no moisture on the probe. If the sensor has become wet, wait for it to dry.
- Always wait for the measurement to stabilize.

Calibration means comparing the measurement output of the device to a known reference, such as a known environment in a calibration chamber or the output of a reference instrument. Correcting the reading of the device so that it measures accurately is referred to as **adjustment**.

6.4.1 Adjustment points and requirements

You can adjust the humidity measurement in 1 ... 5 points, and temperature measurement in 1 ... 2 points. Note the following:

- Humidity adjustment in more than two points is available when using Insight software in **Advanced Mode**.
- If you are adjusting in more than one humidity point, make sure the first two points are at least 10 %RH apart.
- The probe will reject adjustments that are too large, that is, greater than 10 %RH for humidity and 0.5 °C for temperature. If the probe appears to need such a large correction, perform a sensor purge and repeat the adjustment procedure. Make sure the measurement has stabilized and the reference environment is reliable. If the required adjustment is still too large, the probe needs to be serviced by Vaisala.

When adjustment of humidity measurement is necessary, Vaisala recommends adjusting in two points, 11 %RH and 75 %RH. These humidities can be produced using the Vaisala HMK15 Humidity Calibrator.
Adjustment of temperature measurement is typically not necessary.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xvery.cn Email:sxvery@163.com

6.4.2 Adjusting measurement with Insight software

> - Computer with Windows operating system and Vaisala Insight software installed
> - Vaisala USB cable 242659 for connecting the probe
> - Reference environment(s) for producing the desired humidity and/or temperature

This procedure can be used to adjust the probe's humidity or temperature measurement. If you want to adjust both, repeat the procedure.

Because stabilization of temperature and humidity takes time, you should expect the adjustment procedure to take at least 30 minutes for each adjustment point.

1. Connect the probe to Insight. See Connecting to Insight software (page 28).

2. If you intend to adjust humidity measurement, first select ⚙ **> Purge** to perform a chemical purge to condition the sensor. Wait a few minutes for purge to complete.

3. Select ⚙ **> Calibrate > Yes** to switch the probe to calibration mode.
    In calibration mode, the device will not use functions that may interfere with calibration and adjustment.

4. Select the type of adjustment to perform: **RH adjustment** or **T adjustment**.

5. Define the needed adjustment for the first measurement point:

    a. Insert the probe head in the reference environment for the first calibration point.

    b. Wait for the measurement to stabilize fully.

    c. Click the **Reference value, point 1** text box and enter the reference value of the calibration point. Press **ENTER** or click outside the text box when done.

    d. The probe automatically enters the measured values for the calibration point.

6. If you want to adjust in more than one point, repeat step 5 for all desired calibration points.

    > You can adjust humidity measurement in up to five points when Insight is set to **Advanced mode**.

7. Select **Activate adjustment > Yes** to store the adjustment in the probe.

8. Check the message that appears at the top of the screen. If the message indicates that the adjustment is activated successfully, your adjustment is stored in the probe.

9. Select the **Calibration information** tab and update the **Calibration date** and **Calibration text**.

10. Select **Close > Yes** to exit the calibration mode.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备

Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

6.4.3 Adjusting measurement with Indigo 200 transmitter

- Indigo 200 transmitter
- Reference environment(s) for producing the desired humidity and/or temperature (see Adjustment points and requirements (page 40) for more information)
- Mobile device or computer with an internet browser and a Wi-Fi connection
- Connection cable for connecting the probe to Indigo 200 transmitter (optional)

This procedure can be used to adjust the humidity or temperature measurement of an Indigo-compatible HMP or TMP-series probe. Because stabilization of temperature and humidity takes time, you should expect the adjustment procedure to take at least 30 minutes for each adjustment point.

This procedure assumes the Indigo 200 transmitter is powered on and the probe is connected to it. Refer to the user guide of your Indigo 200 transmitter model for instructions on connecting probes. The user guide also provides more detailed instructions for operating and troubleshooting the wireless connection.

1. Connect to the wireless configuration interface of the Indigo 200 transmitter:

   a. Press the wireless connection activation button on the bottom of the transmitter.

   b. Open the wireless connection menu in your mobile device or computer and select **Indigo_ID[xx]** (transmitter-specific SSID) from the list of available connections.

   c. If the wireless configuration interface does not launch automatically on your device, start your browser application manually and navigate to address **192.168.1.1**.

   d. Log in to the interface:
      - User name: **Admin**
      - Password: **12345** (default)

   Stay close to the transmitter for a strong wireless signal and the possibility to read on-screen messages from the transmitter's display (display models only). Starting with Indigo 200 firmware version 1.4.0, messages from the probe are also shown through the wireless configuration interface.

2. To adjust humidity measurement:

    a. If your probe supports the chemical purge feature, wait for the start-up purge to finish or start the purge manually from **Calibration > Configuration > Purge**. Measurement will be frozen for the duration of the purge. Continue when the measured values are changing again.

    b. Select the **Calibration** tab and select **Start calibration** to start the calibration mode.

    c. In the **RH adjustment** section of the page, select **Restore factory adjustment** to remove any existing non-factory adjustments.

    d. Insert the probe head in the reference environment for RH adjustment point 1 (dry point, recommendation 0 ... 35 %RH).

    e. Wait for the RH and temperature measurements to stabilize fully. This may take more than 30 minutes. Monitor the readings to see when the measurement has stabilized.

    f. Enter the value of the first reference into the **Reference value, point 1** field. Select outside the text box when done. The probe automatically enters the measured values for the calibration point.

    g. If you want to adjust humidity measurement in two points, repeat steps step 2.d ... step 2.f for RH adjustment point 2 (wet point, recommendation 65 ... 85 %RH).

    h. Select **Activate adjustment** to store the adjustment in the probe.

> ℹ️ When the adjustment is successful, the fields for reference and measured values are cleared. The message **%0 adjustment activated successfully.** appears on the local display (display models only).
> If the adjustment fails, the fields are not cleared. A message on the transmitter's display will indicate the reason. For example, if the humidity adjustment would be over the maximum 10 %RH allowed by the probe, the message **Cumulative adjustment too large.** appears on the local display.

Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com
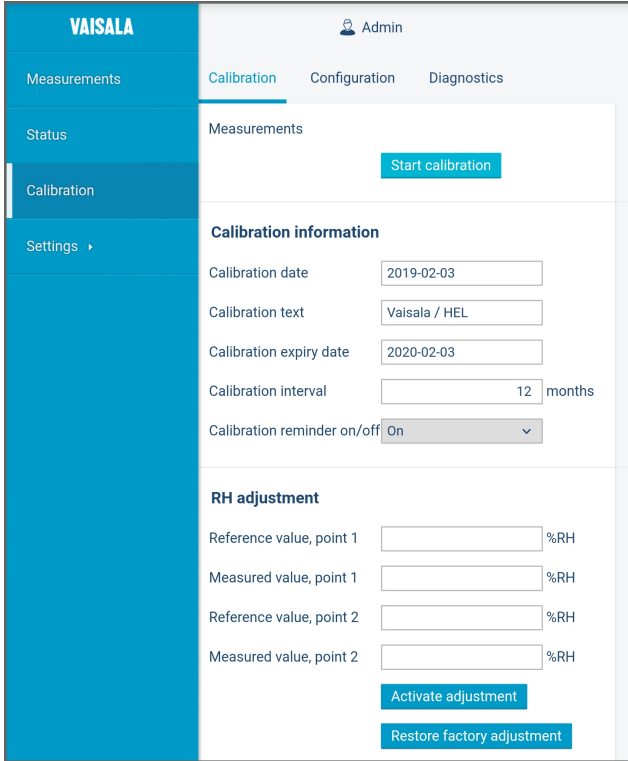

Figure 23   Calibration page in the Indigo 200 wireless configuration interface

3. To adjust temperature measurement:

   a. If you did not adjust humidity measurement, select the **Calibration** tab and select **Start calibration** to start the calibration mode.

   b. In the **T adjustment** section of the page, select **Restore factory adjustment** to remove any existing non-factory adjustments.

   c. Insert the probe head in the reference environment for T adjustment point 1.

   d. Wait for temperature measurement to stabilize fully. This may take more than 30 minutes. Monitor the reading to see when the measurement has stabilized.

   e. Enter the value of the first reference into the **Reference value, point 1** field. Select outside the text box when done. The probe automatically enters the measured value for the adjustment point.

   f. If you want to adjust temperature measurement in two points, repeat steps step 3.c … step 3.f for T adjustment point 2.

   g. Select **Activate adjustment** to store the adjustment in the probe.

4. In the **Calibration information** section of the page, update the **Calibration date** and **Calibration text** fields.

5. Select **Stop calibration** to end the calibration mode.

7. Troubleshooting

7.1 Problem situations

Table 5   Troubleshooting table

Problem	Possible cause	Solution
Measurement output seems incorrect	Installation location is not representative of actual conditions you want to measure	Verify the installation location and relocate the probe if necessary.
	Heat conduction along probe head and cable is interfering with measurement accuracy	Follow the installation recommendations for cases when temperature of measured environment differs greatly from ambient. See Installation (page 14).
	Probe is in need of adjustment	Calibrate and adjust the probe. See Calibration and adjustment (page 39).
Probe status indicator LED is red	Probe is in error state	Connect the probe to Insight software or an Indigo transmitter and read the error message(s). See Vaisala Insight software (page 27) and Error messages (page 46).
Values of measurement parameters stop changing for a few minutes	Probe is performing a sensor heating function such as chemical purge or waiting for the sensor to cool down	Wait for the function to complete and measurement parameters to be available again

7.2 Error messages

The error messages are categorized according to the severity of the status:

- **Critical errors** are fatal to the operation of the device. It may not be able to respond to communication at all, and will not measure correctly.
- **Errors** prevent normal operation of the device. Depending on the problem, errors may resolve themselves. For example, a completely wet humidity sensor may cause a humidity measurement error.
- **Warnings** do not prevent normal operation but may indicate possible problems.
- **Status** indicates a known state of the unit.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

Error message	Description	Recommended action
Critical errors		
Firmware checksum mismatch	Firmware is corrupted	Contact Vaisala technical support
Factory default settings corrupted	Parameter memory is corrupted	
Main configuration settings corrupted		
Additional configuration settings corrupted		
Device settings corrupted		
Sensor coefficients corrupted		
Non-volatile memory read write failure	Hardware fault	
Errors		
Temperature measurement error	Readings from sensors missing or out of range	Inspect probe head and sensors visually. If the probe is completely wet, allow it to dry out.
Humidity measurement error		
Humidity sensor failure		If the sensors are damaged or missing and the error message(s) stay active, contact Vaisala to have the probe repaired.
Capacitance reference error	Hardware fault	Contact Vaisala technical support
Ambient temperature out of range	Probe body too hot or cold	Relocate the probe body so that its ambient temperature is within the specified operating range
Supply voltage out of range	Supply voltage too high or low	Check supply voltage
Sensor heater failure	Hardware fault	Contact Vaisala technical support
Warnings		
Calibration certificate checksum mismatch	Certificate stored in the probe has an invalid checksum	Contact Vaisala technical support
Calibration has expired	Shown by calibration reminder functionality	Calibrate the probe and update the calibration date information
Supply voltage too low for probe heating	Probe heating enabled but supply voltage is too low to use it	Check supply voltage

Property	Description/value
Factory calibration uncertainty [2]	±0.1 °C (±0.18 °F) at +23 °C (+73.4 °F)
Sensor	Pt100 RTD Class F0.1 IEC 60751

1)   *Defined against calibration reference. Including non-linearity, hysteresis, and repeatability.*
2)   *Defined as ±2 standard deviation limits. Small variations possible; see calibration certificate.*
3)   *Chemical purge feature available with this sensor*
4)   *Exposing temperature sensor to temperatures outside −20 … +150 °C (−4 … +302 °F) may*
   *cause permanent additional deviation of ±0.1 °C (0.18 °F)*

Figure 30   HMP5 humidity measurement accuracy as a function of temperature

Figure 31   HMP5 temperature measurement accuracy over full range

Table 15   Operating environment

Property	Description/value
Operating temperature of probe body	−40 … +80 °C (−40 … +176 °F)
Operating temperature of probe head	−70 … +180 °C (−94 … +356 °F)
Operating environment	Suitable for outdoor use
IP rating of probe body	IP66
EMC compliance	EN61326-1, Industrial environment

Table 16   Inputs and outputs

Property	Description/value
Operating voltage	15 … 30 VDC
Current consumption	10 mA typical, 500 mA max.
Digital output	RS-485, non-isolated
Protocols	Modbus RTU
Output parameters	
Relative humidity, temperature, dew point temperature, wet-bulb temperature, absolute humidity, mixing ratio, water concentration, water mass fraction, water vapor pressure, enthalpy

Appendix A. Modbus reference

A.1 Default communication settings

Table 52   Default Modbus serial communication settings

Property	Description/value
Serial bit rate	19200
Parity	None
Number of data bits	8
Number of stop bits	2
Flow control	None
Modbus device address	240

You can use up to ten probes on the same RS-485 line. You must configure each probe on the line to have a different Modbus address.

A.2 Function codes

Table 53   Modbus function codes

Function code (decimal)	Function code (hexadecimal)	Name	Notes
03	03_{hex}	Read Holding Registers	Class 0
16	10_{hex}	Write Multiple Registers	Class 0
43 / 14	$2B_{hex}$ / $0E_{hex}$	Read Device Identification	

A.3 Data encoding

In the data registers, the numeric values are available in one or two formats with separate register addresses: 32-bit IEEE floating point format and/or 16-bit signed integer format.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

A.3.1 32-bit floating point or integer format

Least significant 16 bits of floating point or integer numbers are placed at the smaller Modbus address as specified in Open Modbus TCP Specification, Release 1.0. This is also known as "little-endian" or "Modicon" word order. Floating point values are represented in standard IEEE 32-bit floating point format.

> ℹ️ Despite the specification, some Modbus masters may expect "big-endian" word order (most significant word first). In such case, you must select "word-swapped" floating point format in your Modbus master for the Modbus registers of the device.

A "quiet NaN" value is returned for unavailable values. A quiet NaN is, for example, $7FC00000_{hex}$; however, the master should understand any NaN value.

> ℹ️ A complete 32-bit floating point or integer value should be read and written in a single Modbus transaction.

A.3.2 16-bit integer format

Some 16-bit integer values in the data registers are scaled to include the necessary decimals. The scaling factors for those values are shown in the register tables.

Table 54   16-bit signed integer format details

Value	Description
0000_{hex} ... $7FFE_{hex}$	Value in range 0 ... 32766
8002_{hex} ... $FFFF_{hex}$	Value in range -32766 ... -1 (2's complement)
8000_{hex}	Value is not available (quiet NaN)

> ℹ️ Some values may exceed the signed 16-bit range even in normal operation. To access such values, use the floating point registers instead.

A.4 Modbus registers

> ⚠️ **CAUTION!** Registers are numbered in decimal, starting from one. Register addresses in actual Modbus messages (Modbus Protocol Data Unit (PDU) are in hexadecimal and start from zero. Subtract 1 from the register number presented in this manual to get the address used in the Modbus message (for example, register number 1 corresponds to address 0_{hex} in the actual Modbus message).

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

Accessing unavailable (temporarily missing) measurement data does not generate an exception. "Unavailable" value (a quiet NaN for floating point data or 8000_{hex} for integer data) is returned instead. An exception is generated only for any access outside the applicable register ranges.

A.4.1 Measurement Data Registers

Table 55   Floating point measurement data registers (read-only)

Register number (decimal)	Address (hexadecimal)	Register description	Data format	Unit
1	0000_{hex}	Relative humidity	32-bit float	%RH
	0001_{hex}			
3	0002_{hex}	Temperature	32-bit float	°C
	0003_{hex}			
7	0006_{hex}	Dew point temperature	32-bit float	°C
	0007_{hex}			
9	0008_{hex}	Dew/frost point temperature	32-bit float	°C
	0009_{hex}			
11	$000A_{hex}$	Dew/frost point temperature at 1 atm	32-bit float	°C
	$000B_{hex}$			
13	$000C_{hex}$	Dew point temperature at 1 atm	32-bit float	°C
	$000D_{hex}$			
15	$000E_{hex}$	Absolute humidity	32-bit float	g/m^3
	$000F_{hex}$			
17	0010_{hex}	Mixing ratio	32-bit float	g/kg
	0011_{hex}			
19	0012_{hex}	Wet-bulb temperature	32-bit float	°C
	0013_{hex}			
21	0014_{hex}	Water concentration	32-bit float	ppm_v
	0015_{hex}			
23	0016_{hex}	Water vapor pressure	32-bit float	hPa
	0017_{hex}			

Register number (decimal)	Address (hexadecimal)	Register description	Data format	Unit
25	0018$_{hex}$	Water vapor saturation pressure	32-bit float	hPa
	0019$_{hex}$			
27	001A$_{hex}$	Enthalpy	32-bit float	kJ/kg
	001B$_{hex}$			
29	001C$_{hex}$	Water activity	32-bit float	
	001D$_{hex}$			
31	001E$_{hex}$	Dew point temperature difference	32-bit float	°C
	001F$_{hex}$			
33	0020$_{hex}$	Absolute humidity at NTP	32-bit float	g/m^3
	0021$_{hex}$			
35	0022$_{hex}$	Water concentration in oil	32-bit float	ppm$_v$
	0023$_{hex}$			
41	0028$_{hex}$	Relative saturation	32-bit float	%
	0029$_{hex}$			
65	0040$_{hex}$	Water mass fraction	32-bit float	ppm$_w$
	0041$_{hex}$			

Table 56   Integer measurement data registers (read-only)

Register number (decimal)	Address (hexadecimal)	Register description	Data format	Scale factor	Offset	Unit
257	0100$_{hex}$	Relative humidity	16-bit signed integer	100	0	%RH
258	0101$_{hex}$	Temperature	16-bit signed integer	100	0	°C
260	0103$_{hex}$	Dew point temperature	16-bit signed integer	100	0	°C
261	0104$_{hex}$	Dew/frost point temperature	16-bit signed integer	100	0	°C
262	0105$_{hex}$	Dew/frost point temperature at 1 atm	16-bit signed integer	100	0	°C

A.4.2 Configuration registers

Table 57   Modbus configuration data registers (writable)

Register number (decimal)	Register address (hexadecimal)	Register description	Data format	Unit / valid range
General				
1287	0506$_{hex}$	Extra heat on/off. Enables heating of humidity sensor when close to saturation. Measurement is disabled for the duration of heating and cooling.	16-bit boolean	0 = off (default) 1 = on
1289	0508$_{hex}$	Probe heating on/off. Available on HMP7 model only. When on, output parameters that depend on temperature measurement (for example, relative humidity) are disabled unless temperature is written to register 0334$_{hex}$ from an external source.	16-bit boolean	0 = off (default) 1 = on
2561	0A00$_{hex}$	User information	Text	Text string of 24 bytes in UTF-8 encoding
Compensation setpoints				
769	0300$_{hex}$ 0301$_{hex}$	Pressure compensation setpoint	32-bit float	Unit: hPA Default: 1013.25 hPa

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

Compensation setpoints				
821	0334_{hex} 0335_{hex}	Temperature compensation setpoint. If a value is written to this register, probe uses it instead of its own temperature measurement. When probe heating is in use, temperature must be written to this register to enable output parameters that depend on temperature measurement (for example, relative humidity).	32-bit float	Unit: °C
Purge				
773	0304_{hex} 0305_{hex}	Purge interval	32-bit float	Unit: min 10 ... 14400
1283	0502_{hex}	Interval purge on/off	16-bit boolean	0 = Off 1 = On
1284	0503_{hex}	Startup purge on/off	16-bit boolean	0 = Off 1 = On
Filtering				
795	031A_{hex} 031B_{hex}	Measurement filtering factor	32-bit float	Range: 0.000 ... 1.000 1.000 = Reading shows 100% of the most recent measured value (no filtering, default) 0.01 ... 0.99 = Reading shows 1 ... 99% of the most recent measured value and part of the previous reading (filtering is applied). For example, "0.9" means that the filtered measurement reading = 90% of the most recent measured value + 10% of the previous reading.

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备

Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

Filtering				
1282	0501$_{hex}$	Enable of disable measurement filtering using the user-defined filtering factor (register 031A$_{hex}$)	16-bit boolean	0 = Off 1 = On
Communication				
1537	0600$_{hex}$	Modbus address	16-bit integer	1 ... 247 Default: 240
1538	0601$_{hex}$	Bit rate	enum	0 = 300 1 = 600 2 = 1200 3 = 2400 4 = 4800 5 = 9600 6 = 19200 7 = 38400 8 = 57600 9 = 115200
1539	0602$_{hex}$	Parity, data, stop bits	enum	0 = None, 8, 1 1 = None, 8, 2 2 = Even, 8, 1 3 = Even, 8, 2 4 = Odd, 8, 1 5 = Odd, 8, 2 (default: 1 = None, 8, 2)
1540	0603$_{hex}$	Response delay	16-bit integer	Unit: ms Range: 0 ... 1000
Functions				
1285	0504$_{hex}$	Start purge	16-bit function status	When writing to register: 1 = Start purge
1542	0605$_{hex}$	Restart device	16-bit function status	When writing to register: 1 = Restart the device

A.4.3 Device identification objects

Table 58   Device identification objects

Object id (decimal)	Object id (hexadecimal)	Object name	Example contents
0	00hex	VendorName	"Vaisala"
1	01hex	ProductCode	"HMP4"
2	02hex	MajorMinorVersion	"1.2.3" Software version of the device.
3	03hex	VendorUrl	"http://www.vaisala.com/"
4	04hex	ProductName	"Humidity and Temperature Probe HMP4"
5	05hex	ModelName	"7E2A2A0A000" Configuration code of the device. Length and content of the code are model-specific.
6	06hex	UserApplicationName	User definable information text (see configuration register 0A00hex)
128	80hex	SerialNumber [1]	"K0710040"
129	81hex	CalibrationDate [1]	"2020-01-31" Calibration date in YYYY-MM-DD format. Empty string if not set/valid.
130	82hex	CalibrationText [1]	Calibration information text. Empty string if not set/valid.

1)   *Vaisala-specific device identification object.*

A.4.4 Status registers

Table 59   Modbus status data registers (read-only)

Register number (decimal)	Address (hexadecimal)	Register description	Data format	Note
513	0200hex	Error status	16-bit boolean	**0000hex**: One or more errors active **0001hex**: No errors

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备
Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

Register number (decimal)	Address (hexade cimal)	Register description	Data format	Note
514	0201hex	Online status	16-bit boolean	**0000hex**: Output locked **0001hex**: Online data available
516	0203hex 0204hex	Error code	32-bit signed integer	See Table 60 (page 86).
518	0205hex 0206hex	Security hash	32-bit signed integer	Security hash changes when any change is made to device settings or adjustments.
520	0207hex	RH measurement status	16-bit signed integer	**0000hex**: Status OK **0002hex**: Reading is not reliable
521	0208hex	T measurement status	16-bit signed integer	**0004hex**: Under range
522	0209hex	Tdf measurement status	16-bit signed integer	**0008hex**: Over range **0020hex**: Value locked **0080hex**: Sensor failure **0100hex**: Measurement not ready
523	020Ahex	Device status	16-bit signed integer	**0000hex**: Status OK **0001hex**: Critical error, maintenance needed **0002hex**: Error, device may recover automatically **0004hex**: Warning **0008hex**: Notification **0010hex**: Calibration mode active

Table 60   Error codes in register 0203hex

Bitmask	Error message	Severity
0000hex	Status OK	
0001hex	Temperature measurement error	Error
0002hex	Humidity measurement error	Error
0004hex	Humidity sensor failure	Error

陕西威瑞仪器仪表有限公司 生产代理销售：实验检测设备 气象科学仪器设备

Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

Bitmask	Error message	Severity
0008$_{hex}$	Capacitance reference error	Error
0010$_{hex}$	Ambient temperature out of range	Error
800000$_{hex}$	Sensor heater failure	Warning

A.4.5 Test value registers

Read the known test values from the test registers to verify the functionality of your Modbus implementation.

Table 61 Modbus test registers (read-only)

Register number (decimal)	Register address (hexadecimal)	Register description	Data format	Test value
7937	1F00$_{hex}$	Signed integer test	16-bit integer	-12345
7938	1F01$_{hex}$	Floating point test	32-bit float	-123.45
	1F02$_{hex}$			
7940	1F03$_{hex}$	Text string test	text	Text string "-123.45"
	1F04$_{hex}$			
	1F05$_{hex}$			
	1F06$_{hex}$

Tel:029-88186182 Web:www.xavery.cn Email:sxvery@163.com

A.4.6 Modbus communication examples

Reading relative humidity value

> ℹ️ Device address used in the following examples is 240 (F0$_{hex}$).
> The values returned by the device differ depending on the ambient conditions and/or device settings. Your device might not return exactly same values.

Request		Response	
Bytes on the line (hexadecimal)	**Description**	**Bytes on the line (hexadecimal)**	**Description**
(silence for 3.5 bytes)	Start of Modbus RTU frame	(silence for 3.5 bytes)	Start of Modbus RTU frame
F0$_{hex}$	Probe address	F0$_{hex}$	Probe address
03$_{hex}$	Function (Read Holding Registers)	03$_{hex}$	Function (Read Holding Registers)
00$_{hex}$	Register address	04$_{hex}$	Number of data bytes
00$_{hex}$		7A$_{hex}$	Value of first register (least significant word)
00$_{hex}$	Number of 16-bit registers to read (2)	E1$_{hex}$	
02$_{hex}$		41$_{hex}$	Value of second register (most significant word)
D1$_{hex}$	Modbus RTU checksum	F4$_{hex}$	
2A$_{hex}$		05$_{hex}$	Modbus RTU checksum
(silence for 3.5 bytes)	End of Modbus RTU frame	06$_{hex}$	
		(silence for 3.5 bytes)	End of Modbus RTU frame

Communication description	
Register address	1 (1-based Modbus documentation format) = 0000$_{hex}$ (0-based format used in actual communication).
Data format	Two 16-bit Modbus registers interpreted as IEEE 754 binary32 floating point value, least significant word first.
Returned value	41F47AE1$_{hex}$, which is binary32 representation of 30.56 (%RH).

Writing pressure compensation value

Request		Response	
Bytes on the line (hexadecimal)	**Description**	**Bytes on the line (hexadecimal)**	**Description**
(silence for 3.5 bytes)	Start of Modbus RTU frame	(silence for 3.5 bytes)	Start of Modbus RTU frame
$F0_{hex}$	Probe address	$F0_{hex}$	Probe address
10_{hex}	Function (Write Multiple Registers)	10_{hex}	Function (Write Multiple Registers)
03_{hex}	Register address	03_{hex}	Register address
00_{hex}		00_{hex}	
00_{hex}	Number of registers to write (2)	00_{hex}	Number of 16-bit registers written (2)
02_{hex}		02_{hex}	
04_{hex}	Number of data bytes	AD_{hex}	Modbus RTU checksum
$6E_{hex}$	Value for first register (least significant word)	54_{hex}	
14_{hex}			
44_{hex}	Value for second register (least significant word)	(silence for 3.5 bytes)	End of Modbus RTU frame
75_{hex}			
AB_{hex}	Modbus RTU checksum		
$4E_{hex}$			
(silence for 3.5 bytes)	End of Modbus RTU frame		

> ℹ The response to a write function informs that the function was correctly received by the device. It does not guarantee that the written value was accepted by the device (for example, in case out-of-range values).
>
> To verify that the value was really accepted by the device, read the register value after writing.

Communication description	
Register address	769 (1-based Modbus documentation format) = 0300_{hex} (0-based format used in actual communication).

Online store

Accessories, spare parts, and calibration and repair products are available online at store.vaisala.com.

Warranty

For standard warranty terms and conditions, see www.vaisala.com/warranty.
Please observe that any such warranty may not be valid in case of damage due to normal wear and tear, exceptional operating conditions, negligent handling or installation, or unauthorized modifications. Please see the applicable supply contract or Conditions of Sale for details of the warranty for each product.

Technical support

Contact Vaisala technical support at helpdesk@vaisala.com. Provide at least the following supporting information as applicable:

- Product name, model, and serial number
- Software/Firmware version
- Name and location of the installation site
- Name and contact information of a technical person who can provide further information on the problem

For more information, see www.vaisala.com/support.

Recycling

Recycle all applicable material.

Follow the statutory regulations for disposing of the product and packaging.
